| Clause | Heading | Participant Comments |
|---|---|---|
| 9.2 | NMI Decommissioning | CitiPower Powercor believes the wording "a connection point directly connected to the LNSP's network" is ambiguous, as in the example of a Multiple Occupancy "before" the installation of a 'Parent Meter' to create an Embedded Network, the tenancy connection point is connected via a private network that the LNSP is distributing over, rather than owning and maintaining this network. Strictly speaking the connection points aren't directly connected to the LNSP, the EN and the child connections (on market and off-market) are created by the existence of a Parent Meter.<br><br>It's only the presence of a Parent Meter between these connection points and the LNSP's network that creates and defines their status as a Child connection point of an Embedded Network.<br><br>CitiPower Powercor proposes the following amendments to the NMI Decommisioning clause:<br><br>9.2 (a) A NMI in the metering register can only be recorded as de-commissioned in the metering register when:<br><br>(iii) a child connection point becomes ~~directly~~ connected to the LNSP's network |

| | | |
|---|---|---|
| | | and the parent metering connection point is removed.<br><br>(iv) a connection point ~~directly~~ connected to the LNSP's network becomes an off-market embedded network connection by commissioning of a parent metering connection point.<br><br>(v) a connection point ~~directly~~ connected to the LNSP's network becomes a child connect point by commissioning of a parent metering connection point.<br><br>(vii) a parent metering connection point connected to the LNSP's network is removed (new clause) |
