

# Recalculation of Dispatch Constraint FCAS

This notice is for *Market Participants* interested in accessing recalculated FCAS constraint requirement data

On 5 July 2018, AEMO advised the industry of an issue in the Settlement component of the Energy Market Management System (EMMS), affecting regulation and contingency delayed (5-minute) FCAS cost recovery.

AEMO assessed the impact, rectified the software, and reported the impact in the following communications:

- AEMO Communication Industry Notice, published 20 August 2018.
- Settlement Communication No.269, published 21 August 2018.
- NEM Consultative Forum, published 20 August 2018.

Settlement adjustments have now commenced and will appear in routine revised statements for 2018 week 4 to 2018 week 26 inclusive. To assist participants' reconciliations, new FCAS Constraint requirement data is now available for participants to access and load at a convenient time for them. This solution minimises system impacts.

## Load the files to your Data Interchange environment

1. Access [http://www.nemweb.com.au/Reports/ARCHIVE/DISPATCHIS\\_FCAS\\_FIX/](http://www.nemweb.com.au/Reports/ARCHIVE/DISPATCHIS_FCAS_FIX/).
2. Copy **all** zip files in the folder. There are 29 weeks of data with each file split into weekly chunks.
3. Load the files to your database by placing the zip file in your **pdrLoader Reports folder** for the Loader to consume (see the image below).
4. We estimate each file will take about two minutes for the pdrLoader to consume.

To check if the pdrLoader is finished consuming the files, you can do one of the following:

1. View the **pdrLoader application log** for a finished status.
2. View the status in **Replication Manager**.
3. Query the **PDR\_REPORT\_AUDIT** table.

If you require further assistance, please contact [AEMO's Support Hub](#).
