

NMI ALLOCATION LIST

Version 13 - November 2022

Important Note: This table is a guide only and is provided subject to the Legal Notices that can be accessed at the bottom of AEMO's website. It is important to note that this list details the NMI ranges that have been allocated to participants. This **does not** imply that the participant that is allocated the NMI will remain an active participant or NSP for the NMI. All NEW NMIs should be Numeric unless permitted in accordance with the National Metering Identifier Procedure.

- Notes**
- Characters "O" and "I" are not allowed.
 - Refer to "National Metering Identifier Procedure (NMI)", AEMO document No. ME_GN059 for detailed explanation of NMI structure.
 - DNSP's are free to allocate any combination of alpha-numeric characters in the block issue detailed above excepting exclusions detailed above (e.g. cannot use "W" as fifth character, cannot use characters "O" and "I").
As an example, the block release of VAAA000000 to VAAAZZZZZZ means the range of alpha characters A to Z excluding "O" and "I". Numeric characters 0 to 9 are available to fill the six character positions following VAAA, except for exclusions noted above (eg cannot use "W" as fifth character). The DNSP may allocate NMI's within this range in any format they wish.
 - Exempt & Miscellaneous Networks - blocks are allocated by AEMO to individual exempt or other networks within this grouping.
 - "tni" = use of applicable TNI code within the NMI allocation.
 - Embedded Network Managers - blocks allocated by AEMO to individual Embedded Network Managers to be assigned to child connection points.
