# 1 Introduction

## 1.1 Purpose

This guideline has been produced to map the Postcode to Heating Value Zone in the Victorian Gas Retail Market to ensure compliance with the Retail Market Procedures (Victoria) 3.1.

These procedures require that *each distributor must create, maintain, and administer a database in relation to all of the distribution supply points that are located in the distribution area of that distributor*. This database requires the inclusion of *the heating value zone in which that distribution point is located*.

AEMO will publish a Postcode to Heating Value Zone table mapping to a supply point.

## 1.2 Audience

This guideline is aimed at distributors in the Victorian Gas Retail Market.

### 1.3 Related Documents

There are a number of related documents or artefacts that have been issued as part of Participant Build Packs and should be read in conjunction with this document. The table below defines the documents and the versions.

Ref	Artefact Name	Version	Responsible Party or Authors
1	Retail Market Procedures (Victoria) 3.1	Current version as published on AEMO's website	Gas Retail Consultative Forum (GRFC)
2	Participant Build Pack 1 CSV Data Format Specification	Current version as published in the GIP	AEMO
3	Participant Build Pack 1 Process Table of Transactions	Current version as published in the GIP	AEMO
4	Participant Build Pack 2 Glossary	Current version as published in the GIP	AEMO
5	Participant Build Pack 3 System Interface Definitions	Current version as published in the GIP	AEMO

\* The GIP (Gas Interface Protocol) is published on the AEMO website.

## 1.4 Definitions and Acronyms

Term	Definition
<b>Heating Value Zone</b>	In relation to a supply point, the heating value zone (if any) which is determined by AEMO as the heating Value Zone for that supply point
<b>MIRN</b>	<p>In relation to a supply point at any time, the Metering Installation Registration Number (MIRN) for that supply point as recorded at that time:</p> <ul style="list-style-type: none"> <li>(a) where the supply point is a distribution supply point, in the MIRN database of the Distributor in whose distribution area that supply point is located; and</li> <li>(b) where the supply point is a transmission supply point, in the AEMO meter register,</li> </ul> <p>Please note that acronyms MIRN (Metering Installation Registration Number) and NMI (National Meter Identifier) are used in this document interchangeably.</p> <p>A MIRN is a sub-class of National Metering Identifier (NMI).</p>
<b>Participant Build Packs</b>	The Participant Build Packs (1, 2, 3 and 4) are a set of documents that detail the technical standards and business processes that enable participants to pass information between each other in a uniform method. This set of documentation comprises the Gas Interface Protocol.

**Key:**

*	Update
# abc	Removed not required at this time

**Note:**

1. The Heating Value Zones defined in this table are intended to be essentially the same as the original HV Zones (defined in terms of 1995 postcodes) at the start of the gas market but expressed in terms of the postcodes existing in June 2015.
2. Several postcodes consist of two or more separate "areas" - these are sometimes in different Heating Value Zones.
3. Several postcode areas have been split into two "portions" along geographic boundaries to maintain consistency with gas flows.
4. The defined boundaries are based on reasonable endeavours to match postcode areas to the usual gas flows.
5. Postcode areas change over time and new postcodes are created and some are deleted. If changes or errors are identified please contact AEMO at [supporthub@aemo.com.au](mailto:supporthub@aemo.com.au)
6. Non DTS (Declared Transmission System) previously known as Non PTS (Principle Transmission System) refers to those areas not directly connected to the Declared Distribution System.
