Version Control

A major version change occurs when the WEM Rules or WEM Procedures require changes to the equations from a particular Trading Day onward.

A minor version change may occur for editorial changes, manifest errors or implementation changes that will apply to the same Trading Day period as dictated by the major version.

Version	Changes	Author(s)	Approver
1.0	Original publication consistent with WEM Rules effective 1 September 2019.	Stuart MacDougall	Mark Katsikandarakis
1.1	New functionality added to distinguish between prudentials and settlements. Update of Interest formulae for settlements. Inclusion of Additional Repaid Amounts to be compliant with WEM Rule 9.24.2(b). Correction of SOMS_F_I(f, i) formulae for the Notional Wholesale Meter. Minor changes in formulae or invocation to improve performance.	Stuart MacDougall	Mark Katsikandarakis
2.0	Consequential changes due to new WEM Rules effective 22 February 2020.	Stuart MacDougall	Mark Katsikandarakis
3.0	Consequential changes due to Coordinator fees in new WEM Rules effective 1 July 2021.	Lisa Laurie	Mark Katsikandarakis
4.0	Consequential changes due to new WEM Rules effective 1 October 2021.	Stuart MacDougall	Mark Katsikandarakis
4.1	Inclusion of Default Levy Adjustment to be compliant with WEM Rule 9.24.9(e).	Lisa Laurie	Mark Katsikandarakis
5.0	Publication consistent with WEM Reform Rules effective 1 October 2023.	Stuart MacDougall Lisa Laurie	Nicholas Nielsen
5.1	Consequential changes due to Market Suspension WEM Amending Rules effective 1 October 2023.	Lisa Laurie	Nicholas Nielsen
5.2	Inclusion of Reserve Capacity Obligation Quantity (RCOQ) estimation for prudentials. Minor changes to Variable Categorisation to include Invoice line item descriptions and moved to new section.	Lisa Laurie	Nicholas Nielsen
6.0	Consequential changes due to WEM Amendment (Reserve Capacity Reform) Rules 2023 Schedule 1 effective 13 December 2023: Capacity Rebate removed, SRCC charges updated and Capacity Provider Payment updated.	Lisa Laurie	Nicholas Nielsen
7.0	Consequential changes due WEM Amendment (Miscellaneous Amendments No.3) Rules 2024 Schedule 2 effective 7 October 2024: SRCC charges and NCESS charges updated.	Lisa Laurie	Nicholas Nielsen
8.0	Consequential changes due to WEM Amendment (FCESS Cost Review) Rules 2024 effective 20 November 2024: BESSEM(di) and MOP_F_DI(f, di) definitions updated. Energy Uplift Price, Minimum RoCoF Control Service charges, and FCESS Uplift Payments updated. FCESS Enablement Losses removed. Zero Sum Groups updated.	Lisa Laurie	Lauren Ashby

Contents

1 Introduction

The purpose of this document is to:

- outline WEM Metering, Settlement and Prudential calculations as equations;
- provide additional context or structure equations in such a way that assists in understanding; and
- outline the formulation of a system that could be used to perform both settlement and prudential functions.

This document defines many variables that are used in equations. Each variable will have the following attributes stated to assist in understanding:

Attribute	Explanation	Example
Variable	The name of the variable	$STEMP\_G\_I$
Units	$, {}, MW, MWh, MWs, $/MW, $/MWh, Flag, °C, Hz/500ms	$/MWh
Scope (SC)	Tranche (T), Channel (CH), NMI (N), Contract(C), SESSM Award (SA), Essential System Service (E), Facility-Essential System Service (FE), Network Contingency (NC), Facility-Network Contingency (FNC), Capacity Credit Allocation (A), Separately Certified Component (SCC), Facility (F), Participant (P), Global (G)	G
Granularity (GR)	Dispatch Interval (DI), Trading Interval (I), Trading Day (D), Trading Week (W*), Trading Month (M), Capacity Year (CY), Financial Year (FY), Independent from time (X)	I
Rule	WEM Rule reference	6.9.7
Description	A description of the variable	STEM Clearing Price in Trading Interval i
Ref	Either the equation number where it is defined in this document, or 'I' to denote an input	I

* Trading Week granularity will include a numeric suffix that indicates on which day of the week the Trading Week commences on i.e. 0 = Sunday, 1 = Monday, ... 4 = Thursday etc. This suffix will be included where the granularity is used but not in the variable name e.g. $ESTIMATIONFlag\_G\_W(w)$ and not $ESTIMATIONFlag\_G\_W0(w)$.

Granularity has a strict hierarchy: a Capacity Year is comprised of Trading Months which are comprised of Trading Days which are comprised of Trading Intervals which are comprised of Dispatch Intervals. Some variables have no time component, for example, they relate purely to a contract. In this instances the granularity is denoted as X. This hierarchy is represented in Figure 1.

When defining a variable, it will always be defined for its granularity. For example, the variable $IRCR\_P\_M(p,m)$ is defined for a particular Trading Month m. It will only be defined by variables with a granularity of Trading Month or coarser. However, when the variable is used to define other equations it may be expressed using a granularity finer than its granularity, for example $IRCR\_P\_M(p,d)$. When the variable is expressed like this, it is implicit that it refers to the Trading Month m, in which Trading Day d falls.

A similar hierarchy (and convention) is adopted for scopes as illustrated by Figure 2.

Figure 1: Granularity hierarchy

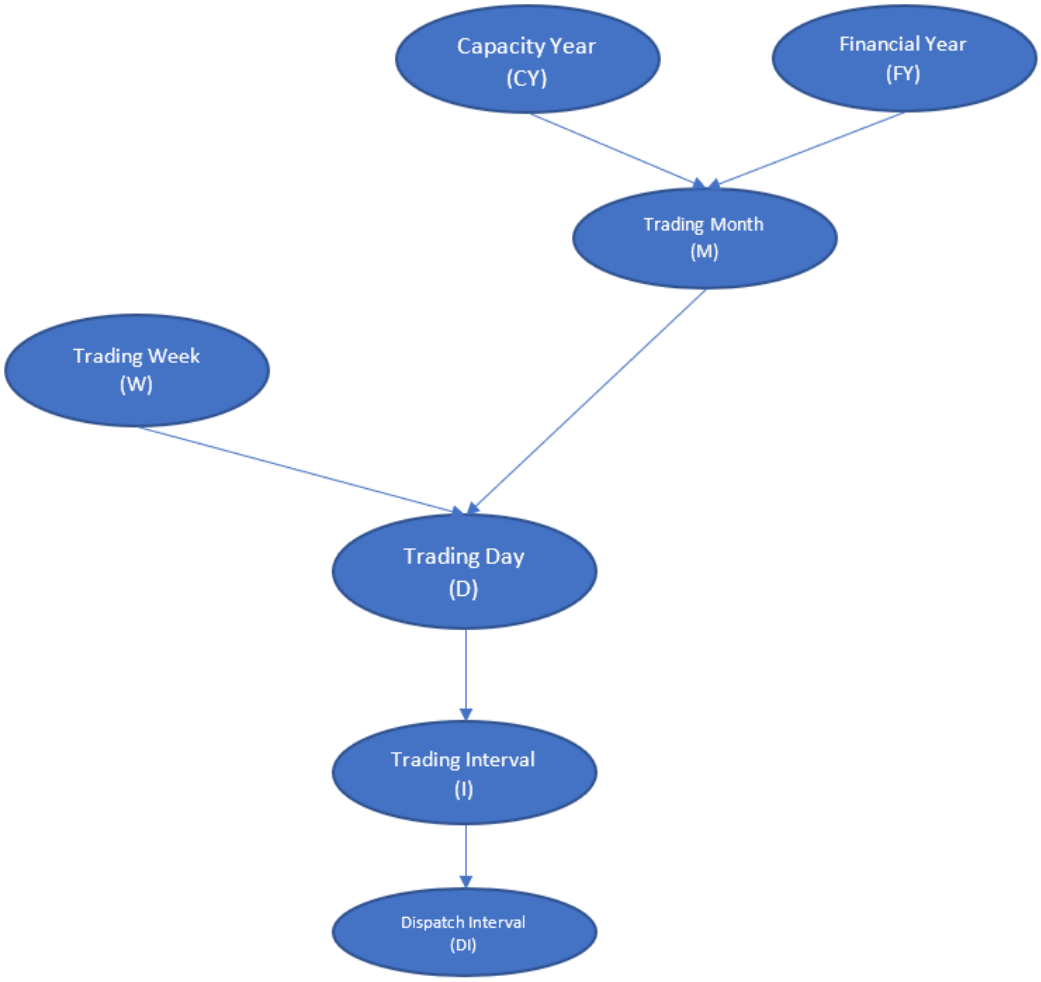

Figure 2: Scope hierarchy

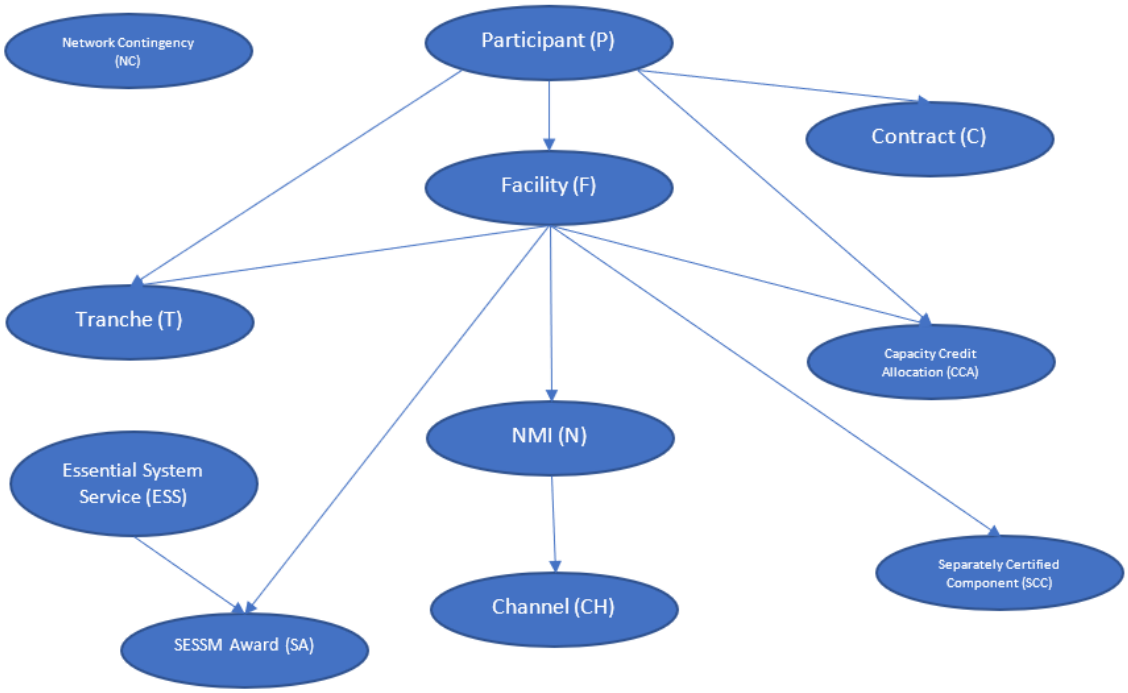


2 Defined Terms, Sets and Associations

Defined terms are used throughout the rules. These defined terms often convey specific information, for example the term Scheduled Facility requires the facility to be registered with AEMO as outlined in the definition. Similarly, some specific calculations only apply, or are interpreted based on these defined terms. In the implementation, these defined terms are often represented as a set of Facilities (or Participants) that meet the definition of the defined term. Furthermore, there are often associations between defined terms within the rules, for example Facilities are associated to participants through registration.

This document defines all sets with the following conventions:

- The definition of each set variable is always Global and for a Trading Day and therefore the variable name omits information about scope and granularity. For example the set of Scheduled Facilities in Trading Day d is represented as $SF(d)$, rather than being named $SF\_G\_D(d)$.
- Subsets are defined by adding a scope argument. For example $SF(p, d)$ represents the subset of $SF(d)$ associated with participant p.

2.1 Participant Sets

2.1.1 Axiomatic Participant Sets in AEMO systems

Calculations defined in the rules depend on different sets of participants. The participant sets outlined below are considered to be axiomatic, or the base sets, upon which all other sets will be created. These base sets are defined in terms of how AEMO's systems have been created. Sets which are calculated later are often sets of participants which are defined in the rules, and in these instances the rule reference is provided.

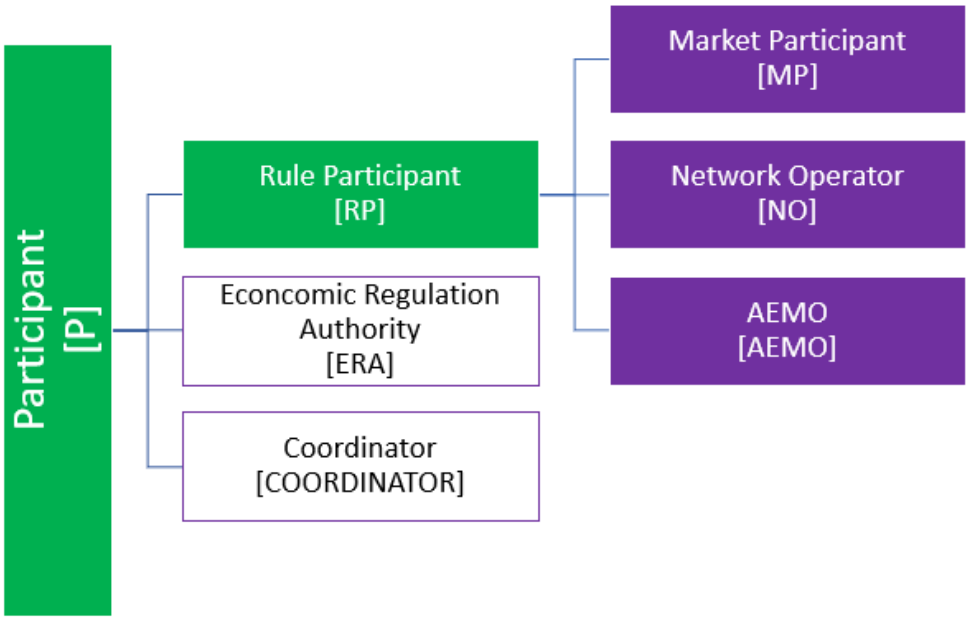
Variable	Units	SC	GR	Rule	Description	Ref
WEMS_MP(d)	{}	G	D		Set of participants with MP participant class in WEMS in Trading Day d	I
WEMS_NO(d)	{}	G	D		Set of participants with NO participant class in WEMS in Trading Day d	I
WEMS_PREG(d)	{}	G	D		Set of participants registered in WEMS in Trading Day d	I

2.1.2 Sets of Rule Participant classes

The following are classes of Rule Participants [MR 2.28.1]:

- Network Operator (NO)
- Market Participant (MP)
- AEMO (AEMO)

The diagram below shows the relationship between Rule Participant classes (purple) and other sets of participants (green).



These sets are defined as follows:

$$P\_M(m) = \bigcup_{d \in D(m)} P(d) \tag{1}$$

$$P\_CY(cy) = \bigcup_{d \in D\_CY(cy)} P(d) \tag{2}$$

$$P(d) = COORDINATOR(d) \cup ERA(d) \cup RP(d) \tag{3}$$

$$COORDINATOR(d) = \{COE\} \tag{4}$$

$$ERA(d) = \{ERA\} \tag{5}$$

$$WPNTWK(d) = \{WPNTWK\} \tag{6}$$

$$RP(d) = MP(d) \cup NO(d) \cup AEMO(d) \tag{7}$$

$$MP(d) = WEMS\_PREG(d) \cap WEMS\_MP(d) \tag{8}$$

$$AEMO(d) = \{IMOWA\} \tag{9}$$

$$NO(d) = WEMS\_PREG(d) \cap WEMS\_NO(d) \tag{10}$$

2.2 Facility Sets

2.2.1 Axiomatic Facility Sets in AEMO systems

Calculations defined in the rules depend on different sets of Facilities. The Facility sets outlined below are considered to be axiomatic, or the base sets, upon which all other sets will be created. These base sets are defined in terms of how AEMO's systems have been created. Sets which are calculated later are often sets of Facilities which are defined in the rules, and in these instances the rule reference is provided.

RCM_DSP(d)	{}	G	D		Set of Facilities with an indicative DSP RCM Type in Trading Day d	I

2.2.2 Sets of Facility Technology Types and Facility Classes

The following are Facility Technology Types [MR 2.29.1]:

- distribution system (DX)
- transmission system (TX)
- Intermittent Generating System (IG)
- Non-Intermittent Generating System (NIG)
- Electric Storage Resource (ESR)
- Load (LOAD)

The following are Facility Classes [MR 2.29.1A]:

- Network (NTWK)
- Scheduled Facility (SF)
- Semi-Scheduled Facility (SSF)
- Non-Scheduled Facility (NSF)
- Interruptible Load (IRL)
- Demand Side Programme (DSP)

These sets are defined as follows.

$$DSP(d) = WEMS\_FREG(d) \cap WEMS\_DSP(d) \tag{11}$$

$$indDSP(d) = \overline{WEMS\_FREG(d)} \cap RCM\_DSP(d) \tag{12}$$

$$SF(d) = WEMS\_FREG(d) \cap WEMS\_SF(d) \tag{13}$$

$$indSF(d) = \overline{WEMS\_FREG(d)} \cap RCM\_SF(d) \tag{14}$$

$$SSF(d) = WEMS\_FREG(d) \cap WEMS\_SSF(d) \tag{15}$$

$$indSSF(d) = \overline{WEMS\_FREG(d)} \cap RCM\_SSF(d) \tag{16}$$

$$NSF(d) = WEMS\_FREG(d) \cap WEMS\_NSF(d) \tag{17}$$

$$indNSF(d) = \overline{WEMS\_FREG(d)} \cap RCM\_NSF(d) \tag{18}$$

$$IRL(d) = WEMS\_FREG(d) \cap WEMS\_IL(d) \tag{19}$$

$$NDL\_WEMS(d) = WEMS\_FREG(d) \cap WEMS\_NDL(d) \tag{20}$$

$$NOTIONAL(d) = \{NOTIONAL\} \tag{21}$$

$$NTWK(d) = WEMS\_FREG(d) \cap WEMS\_N(d) \tag{22}$$

2.2.3 Other Facility Sets

Additional sets of Facilities are required by the rules and are defined below.

$$REG\_F(d) = DSP(d) \cup SF(d) \cup SSF(d) \cup NSF(d) \cup IRL(d) \cup NTWK(d) \tag{23}$$

$$NDL(d) = NDL\_WEMS(d) \cup NDL\_MTR(d) \cup NOTIONAL(d) \tag{24}$$

$$Typical\_REGF(d) = (SF(d) \cup SSF(d) \cup NSF(d)) \cap \overline{EG(i)} \tag{25}$$

$$IML(d) = (IRL(d) \cup NDL\_WEMS(d)) \cap WEMS\_IM(d) \tag{26}$$

$$EG(d) = WEMS\_FREG(d) \cap WEMS\_EG(d) \tag{27}$$

2.4 Associations

Associations are used to link two entities to each other. These associations are used in the document for the following purposes:

- To reference a variable or attribute that applies to the parent of a child by relying on the primary or additional associations listed below e.g. $RCP\_F\_D(T2F(t), d)$ is referring to the RCP_F_D value for the Facility that is associated with tranche t on Trading Day d.
- To reference a Facility or NMI associated with an Intermittent Load by relying on the additional associations listed below e.g. $IML2EG(f, i)$ is referring to the Facility that is associated with the Embedded Generator that is associated with Intermittent Load f in Trading Interval i.

2.4.1 Primary Associations

Association	Child SC	Parent SC	Description
F2P	F	P	Association between Facility f and participant p
N2F	N	F	Association between NMI n and Facility f (excluding DSPs)
SCC2F	SCC	F	Association between Separately Certified Component scc and Facility f
CH2N	CH	N	Association between channel ch and NMI n
C2P	C	P	Association between contract c and participant p
A2F	A	F	Association between a Capacity Credit Allocation a and Facility f
SA2FE	SA	FE	Association between SESSM Award sa and Facility f and Essential System Service e

2.4.2 Additional Associations

Association	Child SC	Parent SC	Description
IML2EG	F	F	Association between Intermittent Load f and any embedded generator
IML2NS	N	F	Association between Intermittent Load f and any connection points (NMIs) which are separately metered (and settled)
A2PM	A	P	Association between Capacity Credit Allocation a and the Market Participant making the allocation
A2PR	A	P	Association between Capacity Credit Allocation a and the Market Participant receiving the allocation
T2F	T	F	Association between tranche t and the Facility associated with the tranche
T2P	T	P	Associations between tranche t and the participant associated with the trance

3 Metering Calculation Engine

Metering calculations are fundamental to settlement and prudential calculations. Due to the large volumes of data, metering calculations are separated from the main calculation engine.

Metered Schedules are calculated for:

- Non-Dispatchable Loads (excluding those represented by the Notional Wholesale Meter)
- Scheduled Facilities
- Semi-Scheduled Facilities
- Non-Scheduled Facilities
- Notional Wholesale Meter

In order to determine these Metered Schedules the following information is required:

- Connection point energy quantities
- Facility category
- Facility aggregation requirements

The purpose of this section is to define Sent Out Metered Schedules (non-loss adjusted energy) and Metered Schedules (loss adjusted energy) for each category of facility defined in the registration chapter. The Metered Schedules and Sent Out Metered Schedules for unregistered NDLs are the same as the connection point's Metered Schedules as defined previously. Intermittent Load facilities Metered Schedules do not use the same variables as all other facilities. These Metered Schedules are detailed in their own section.

The equations in the following sections incorporate the concept of Aggregated Facilities [MR 2.30], which is a Registered Facility with more than one connection point.

When estimating meter data, AEMO uses more general metering equations to incorporate estimation methodology. When actual data is available, the equations simplify to the previously outlined metering equations. The more general metering equations are detailed in the subsequent subsections.

3.1 Invocation

The following table outlines the invocation for the high-level calculations.

Variable	Scope Set
$MS\_F\_I(n,i)$	$\forall f \in SF(i) \cup SSF(i) \cup NSF(i) \cup NDL(i)$
$SOMS\_F\_I(f,i)$	$\forall f \in SF(i) \cup SSF(i) \cup NSF(i) \cup NDL(i)$

Variable	Units	SC	GR	Rule	Description	Ref

SF(d)	{}	G	D	Ch 11	Set of Scheduled Facilities in Trading Day d	(13)
SSF(d)	{}	G	D	Ch 11	Set of Semi-Scheduled Facilities in Trading Day d	(15)

3.2 Connection Point Energy Quantities

Western Power is a Metering Data Agent and provides AEMO with:

- Meter standing data (Participant, TLF, DLF); and
- Meter energy data (kWh).

Each connection point is assigned a NMI (National Meter Identifier).

For any single Trading interval, a NMI may have multiple meter channels that measure and store energy data. The type of data varies; however, the channels containing energy data relevant to AEMO are B channels which measure generation; and E channels which measure consumption.

The image below shows a sample of standing data received from Western Power. In this example it shows that NMI 8001000266 had a TLF of TSAV, a DLF of QRT6, and a Financially Responsible Market Participant (FRMP) of ERMPOWER.

```

Some specific items of note:

- Meter Standing Data only provides data at a specific point in time i.e. no historical data is stored in the file. Therefore AEMO's databases must consider how it will maintain historical information.
- The TLF is sent to AEMO against the TransmissionNodeIdentifier attribute. Market Participants (other than AEMO) receive files with the Transmission Network Identifier (TNI) in this field, and they do not receive TLFs. A TLF can be derived from a TNI and historical metering data.
- Each NMI n has a non-loss adjusted energy quantity associated with it for every Trading Interval i.
- Facilities without an interval meter (i.e. SCADA-only facilities) have the identical NMI name and Facility name in AEMO's systems (e.g. $n = COLLIE\_G1$, $f = COLLIE\_G1$).

$$MeterData\_N\_I(n,i) = \begin{cases} SCADA\_F\_I(n,i) & \text{for } n \in NOINTMETER(i) \\ netMQ\_N\_I(n,i) & \text{for } n \notin NOINTMETER(i) \end{cases} \tag{28}$$

$$netMQ\_N\_I(n,i) = \sum_{ch \in B(n,i)} MQ\_CH\_I(ch,i) - \sum_{ch \in E(n,i)} MQ\_CH\_I(ch,i) \tag{29}$$

$$estMeterData\_N\_I(n,i) = MeterData\_N\_I(n, LDLP\_N\_I(n,i)) \times SF\_N\_I(n,i) \tag{30}$$

3.3 Metered Schedules (including estimation)

Metered Schedules are required to be estimated for the purposes of determining a Market Participant's Outstanding Amount.

When a Metered Schedule does not exist because data is yet to be provided by the Meter Data Agent, an estimation methodology is used to scale data from a similar period, depending on what data is available. The following sections outline:

- the estimation methodology consistent with the requirements in WEM Procedure: Prudential Requirements.
- how data statuses are used to indicate if data exists;
- how a similar interval is determined using a 'Like Day, Like Period' methodology; and
- how scaling factors are used.

3.3.1 Standard Metered Schedules (including estimation)

Meter Schedules are determined or estimated based on what data is available. The general philosophy for what data to use is based on the following hierarchy as dictated by the WEM Procedure: Prudential Requirements:

1. Use $MeterData\_N\_I$ data for the entire Facility, if $MeterData\_N\_I$ data exists for any NMI associated with Facility f, in Trading Interval i
2. Use SCADA energy data if it exists for Facility f, in Trading Interval i
3. Use EOI Quantity if it exists for Facility f, in Trading Interval i
4. Scale $MeterData\_N\_I$ data for Facility f in the most recent similar interval of Trading Interval i

$$MS\_F\_I(f,i) = \begin{cases} SOMS\_N\_I(f,i) \times TLF\_N\_D(f,i) \times DLF\_N\_D(f,i) & \text{for } f \in NDL\_MTR(i) \\ SOMS\_F\_I(f,i) \times TLF\_F\_D(f,i) \times DLF\_F\_D(f,i) & \text{for } f \in Typical\_REGF(i) \cup (NDL\_WEMS(i) \cap \overline{IML(i)}) \\ MSIL\_F\_I(f,i) + MSEL\_F\_I(f,i) & \text{for } f \in IML(i) \\ MSEG\_F\_I(EG2IML(f,i),i) & \text{for } f \in EG(i) \\ -1 \times \sum_{f \in SF(i) \cup SSF(i) \cup NSF(i) \cup NDL \cap \overline{NOTIONAL(i)}} MS\_F\_I(f,i) & \text{for } f \in NOTIONAL(i) \\ 0 & \text{otherwise} \end{cases} \tag{31}$$

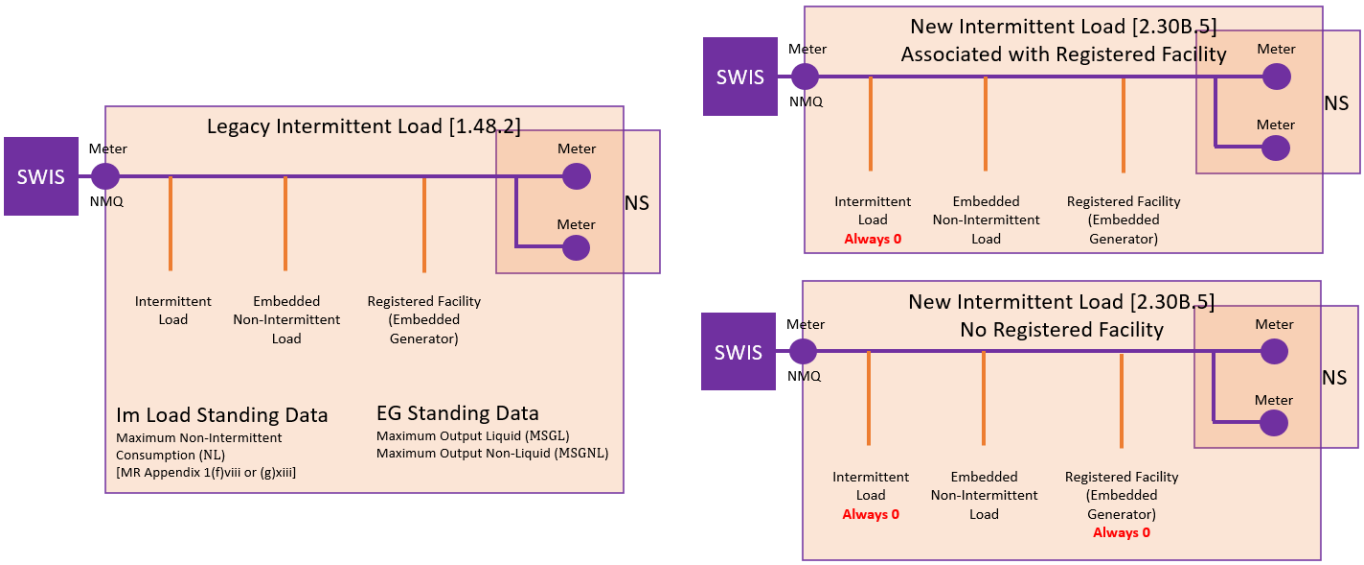
3.3.2 Intermittent Load Metered Schedules (including estimation)

An Intermittent Load comprises the following components that are all measured by the single connection point associated with the Intermittent Load:

- Intermittent load associated with Load f
- Embedded Load (non-Intermittent Load) that is non-Intermittent Load f
- Generation associated with a Registered Facility $IML2EG(f, d)$

The Metered Schedule calculations are different depending on whether the Intermittent Load existed prior to the New WEM Commencement Day (Legacy Intermittent Load) or not (New Intermittent Load).

The figure below is a graphical representation of this configuration.



The purpose of this section is to define the Metered Schedule Quantities for each of the components. To do this, various standing data relating to the Intermittent Load and the embedded generator is used; however, the first step is to perform the following preliminary calculations to derive AMQ_F_I.

Note, that the equations (35), (37) and (39) refer to more generalised equations (36), (38) and (40) to handle prudentials as well as settlement.

The net metered quantity associated with the Intermittent Load is calculated:

$$NNMQ\_F\_I(f,i) = \sum_{n \in NMI(f,i)} MeterData\_N\_I(n,i) \tag{35}$$

$$estNNMQ\_F\_I(f,i) = \sum_{n \in NMI(f,i)} estMeterData\_N\_I(n,i) \tag{36}$$

$$NMQ\_F\_I(f,i) = NNMQ\_F\_I(f,i) \times TLF\_F\_D(f,i) \times DLF\_F\_D(f,i) \tag{37}$$

$$estNMQ\_F\_I(f,i) = estNNMQ\_F\_I(f,i) \times TLF\_F\_D(f,i) \times DLF\_F\_D(f,i) \tag{38}$$

The meter data associated with each individual NMI that is separately metered (and settled) associated with the Intermittent Load is calculated:

$$NS\_F\_I(f,i) = \sum_{n \in NS(f,i)} MeterData\_N\_I(n,i) \times TLF\_N\_D(n,i) \times DLF\_N\_D(n,i) \tag{39}$$

$$estNS\_F\_I(f,i) = \sum_{n \in NS(f,i)} estMeterData\_N\_I(n,i) \times TLF\_N\_D(n,i) \times DLF\_N\_D(n,i) \tag{40}$$

Any separately metered (and settled) quantities associated with the Intermittent Load are removed to determine AMQ.

$$AMQ\_F\_I(f,i) = \begin{cases} NMQ\_F\_I(f,i) - NS\_F\_I(f,i) & \text{if } AfterIMDFlag\_G\_D(i) = 1 \text{ or } isData\_F\_I(f,i) > 0 \\ SCADA\_F\_I(f,i) & \text{elseif } SCADANullFlag\_G\_D(i) = 0 \\ 0.5h \times SCADAEOI\_F\_I(f,i) & \text{elseif } EOINullFlag\_G\_D(i) = 0 \\ estNMQ\_F\_I(f,i) - estNS\_F\_I(f,i) & \text{otherwise} \end{cases} \tag{41}$$

TLF_F_D(f, d)		F	D		Transmission Loss Factor for Facility f for Trading Day d	I
TLF_N_D(n, d)		N	D		Transmission Loss Factor for NMI n for Trading Day d	I

Then the AMQ_F_I value is split into three components based on whether it existed prior to New WEM Commencement Day, the standing data of the Intermittent Load or its associated embedded generator.

For Legacy Intermittent Loads:

- If AMQ_F_I is positive (generating), then the generation is attributed to the embedded generator up until its maximum sent out generation, with any excess generation being attributed to the Intermittent Load Metered Schedules.
- If AMQ_F_I is negative (consuming), then the consumption is attributed to the embedded load up until its maximum non-intermittent consumption, with any excess consumption being attributed to the Intermittent Load Metered Schedules.

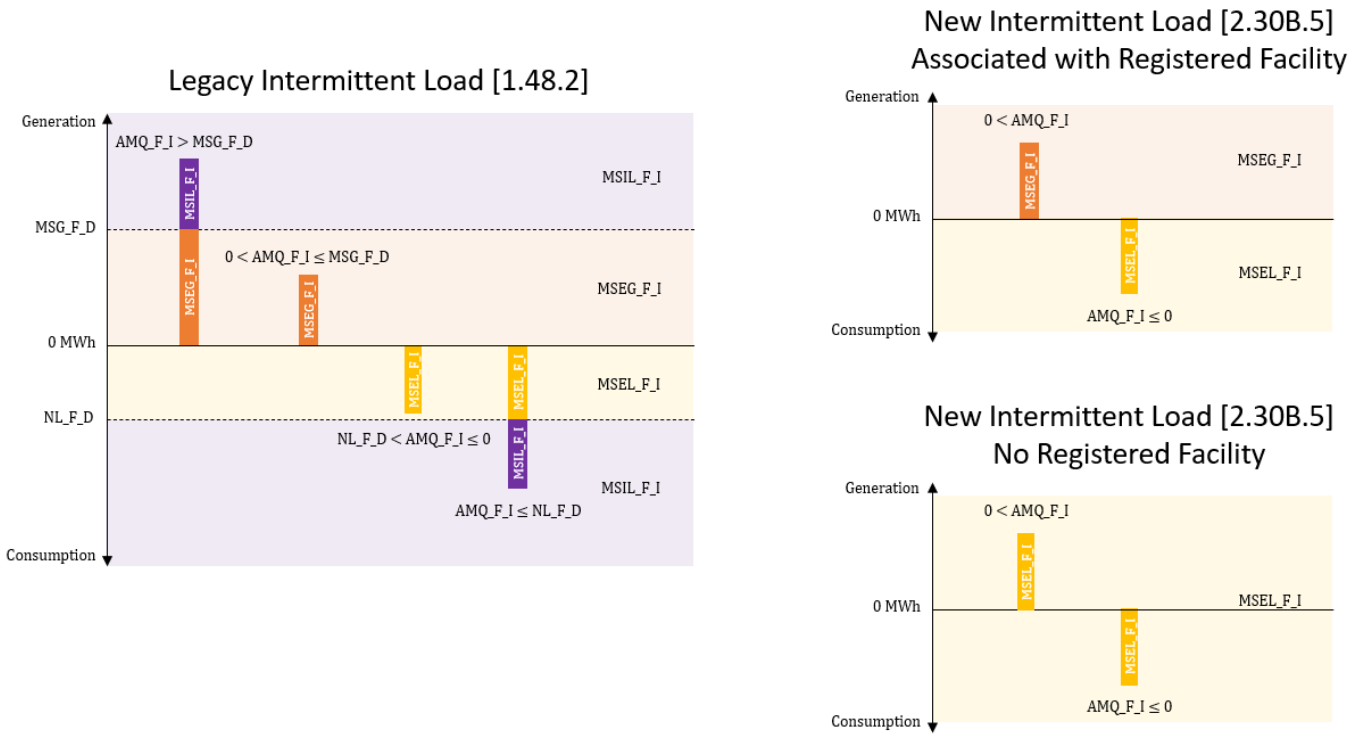
For New Intermittent Loads that are associated with a Registered Facility:

- If AMQ_F_I is positive (generating), then the generation is attributed to the embedded generator.
- If AMQ_F_I is negative (consuming), then the consumption is attributed to the embedded load.

For New Intermittent Loads that are not associated with a Registered Facility:

- AMQ_F_I is attributed to the embedded load.

The diagram below illustrates this concept.



Mathematically, this is achieved by performing the following calculations.

The maximum non-intermittent Load associated with Intermittent load f is determined as:

$$NL\_F\_D(f,d) = -NLstanding\_F\_D(f,d) \times TLF\_F\_D(f,d) \times DLF\_F\_D(f,d) \tag{42}$$

The maximum Sent Out Generation for an embedded generator, e, associated with Intermittent Load f is determined as:

$$MSGEG\_F\_D(f,d) = MSG\_F\_D(IML2EG(f,d),d) \tag{43}$$

$$MSG\_F\_D(f,d) = 0.5h \times SOC\_F\_D(f,d) \times TLF\_F\_D(f,d) \times DLF\_F\_D(f,d) \tag{44}$$

$$SOC\_F\_D(f,d) = max(0, MSOC\_F\_D(f,d)) \tag{45}$$

Although the equations in the rules for Legacy Intermittent Loads are written differently to the equations below, they are mathematically equivalent.

$$MSEL\_F\_I(f,i) = \begin{cases} min(0, max(NL\_F\_D(f,i), AMQ\_F\_I(f,i))) & \text{for } f \in IML(i) \cap LegacyIML(i) \\ min(0, AMQ\_F\_I(f,i)) & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f,i) \text{ is not NULL} \\ AMQ\_F\_I(f,i) & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f,i) \text{ is NULL} \end{cases} \tag{46}$$

$$MSEG\_F\_I(f,i) = \begin{cases} max(0, min(MSGEG\_F\_D(f,i), AMQ\_F\_I(f,i))) & \text{for } f \in IML(i) \cap LegacyIML(i) \\ max(0, AMQ\_F\_I(f,i)) & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \text{ and } IML2EG(f,i) \text{ is not NULL} \\ 0 & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \text{ and } IML2EG(f,i) \text{ is NULL} \end{cases} \quad (47)$$

$$MSIL\_F\_I(f,i) = \begin{cases} AMQ\_F\_I(f,i) - MSEL\_F\_I(f,i) - MSEG\_F\_I(f,i) & \text{for } f \in IML(i) \cap LegacyIML(i) \\ 0 & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \text{ and } IML2EG(f,i) \text{ is not NULL} \\ 0 & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \text{ and } IML2EG(f,i) \text{ is NULL} \end{cases} \quad (48)$$

The non-loss adjusted Metered Schedules for embedded load, embedded generator and Intermittent Load are defined as:

$$SOMSEL\_F\_I(f,i) = \frac{MSEL\_F\_I(f,i)}{TLF\_F\_D(f,i) \times DLF\_F\_D(f,i)} \quad (49)$$

$$SOMSEG\_F\_I(f,i) = \frac{MSEG\_F\_I(f,i)}{TLF\_F\_D(f,i) \times DLF\_F\_D(f,i)} \quad (50)$$

$$SOMSIL\_F\_I(f,i) = \frac{MSIL\_F\_I(f,i)}{TLF\_F\_D(f,i) \times DLF\_F\_D(f,i)} \quad (51)$$

3.3.4 Like Day, Like Period (LDLP)

A 'Like Day' of Trading Interval i is defined as follows:

- If i falls on a Trading Day d that is a Public Holiday, then a 'Like Day' is any Trading Day that is a Sunday.
- If i falls on a Trading Day d that is not a public holiday, then a 'Like Day' is any Trading Day that is not a Public Holiday and is the same day of the week as d.

The set of Trading Days that are a 'Like Day' of Trading Interval i is infinitely large. For the purposes of estimation, the set of Like Days we will use will be defined as the union of:

- the set of Like Days that occur after the last Trading Day for which the relevant Interval Meter Deadline has passed; and
- the set containing the most recent Like Day for which the relevant Interval Meter Deadline has passed.

A 'Like Period' of Trading Interval i is defined as any Trading Interval that is the same time of day as i.

A 'Like Day, Like Period' of i, is defined as a Trading Interval that both falls on a 'Like Day' of i and is a 'Like Period' of i.

$$LDLP(i) = \text{The set of 'Like Day, Like Periods' of } i \text{ as illustrated in the description above and table below.} \quad (54)$$

$LDLP(i)$ set is ordered from most recent interval to least recent interval. LDLP(i)[1] refers to the most recent interval in the set and LDLP(i)[j] refers to the least recent interval in the set.

Refer to the table below for examples illustrating LDLP(i) for estimating Trading Interval i when the calculation is performed at time j.

#	i @ j	LDLP(i) @ j	Purpose of example
1	20:30 Fri 03 May 2019 calculated @ 23:59 01 May 2019	{20:30 Fri 26 Apr 2019, ~~20:30 Fri 19 Apr 2019~~, 20:30 Fri 12 Apr 2019, 20:30 Fri 05 Apr 2019, 20:30 Fri 29 Mar 2019, 20:30 Fri 22 Mar 2019, 20:30 Fri 15 Mar 2019, 20:30 Fri 08 Mar 2019, 20:30 Fri 01 Mar 2019, 20:30 Fri 22 Feb 2019}	Shows omission of Public Holidays (Good Friday) when i is not a Public Holiday.
2	20:30 Fri 03 May 2019 calculated @ 00:00 02 May 2019	{20:30 Fri 26 Apr 2019, ~~20:30 Fri 19 Apr 2019~~, 20:30 Fri 12 Apr 2019, 20:30 Fri 05 Apr 2019, 20:30 Fri 29 Mar 2019}	Compare with example 1 to show effect of calculating after the Interval Meter Deadline for Trading Month March 2019 on 8 May 2019.
3	08:00 Thu 25 Apr 2019 calculated @ 13:00 27 Apr 2019	{08:00 Sun 21 Apr 2019, 08:00 Sun 14 Apr 2019, 08:00 Sun 07 Apr 2019, 08:00 Sun 31 Mar 2019, 08:00 Sun 24 Mar 2019, 08:00 Sun 17 Mar 2019, 08:00 Sun 10 Mar 2019, 08:00 Sun 03 Mar 2019, 08:00 Sun 24 Feb 2019}	Shows example when i falls on a Trading Day that is a Public Holiday (ANZAC Day).
4	07:30 Thu 25 Apr 2019 calculated @ 13:00 27 Apr 2019	{07:30 Thu 18 Apr 2019, 07:30 Thu 11 Apr 2019, 07:30 Thu 04 Apr 2019, 07:30 Thu 28 Mar 2019, 07:30 Thu 21 Mar 2019, 07:30 Thu 14 Mar 2019, 07:30 Thu 07 Mar 2019, 07:30 Thu 28 Feb 2019}	Compare with example 3 to show distinction between a Trading Day that is a Public Holiday and a calendar day that is a Public Holiday.

In subsequent sections, $LDLP\_N\_I(n,i)$ will be used as the inputs to functions that expect a single Trading Interval (and not a set of Trading Intervals). The purpose of this variable is to return the interval itself, if data is available, otherwise to return the most recent interval in the set LDLP(i), for which data exists. This is defined mathematically in the equations below.

$$LDLP\_N\_I(n,i) = \begin{cases} i & \text{if } isData\_N\_I(n,i) = 1 \text{ or } AfterIMDFlag\_G\_D(i) = 1 \\ LDLP(i)[1] & \text{elseif } isData\_N\_I(n, LDLP(i)[1]) = 1 \\ LDLP(i)[2] & \text{elseif } isData\_N\_I(n, LDLP(i)[2]) = 1 \\ \quad\vdots & \quad\vdots \\ LDLP(i)[j-1] & \text{elseif } isData\_N\_I(n, LDLP(i)[j-1]) = 1 \\ LDLP(i)[j] & \text{otherwise} \end{cases} \tag{55}$$

Variable	Units	SC	GR	Rule	Description	Ref
LDLP_N_I(n, i)		N	I		The interval used to determine scaled meter data for NMI n in Trading Interval i	(55)
AfterIMDFlag_G_D(d)	Flag	G	D		Flag that is 1 when the Interval Meter Deadline has passed for the Trading Week of Trading Day d, and 0 otherwise	I
isData_N_I(n, i)	Flag	N	I		Flag that is 1 when NMI n has energy data in Trading Interval i, and 0 otherwise	(53)
LDLP(i)	{}	G	I		Set of Like Day, Like Periods of Trading Interval i. $LDLP(i)[1]$ represents the most recent Like Day, Like Period of Trading Interval i and $LDLP(i)[j]$ represents the least recent Like Day, Like Period of Trading Interval i	(54)

3.3.5 Scaling Factors

$$SF\_N\_I(n,i) = \begin{cases} ACTIVE\_N\_D(n,i) \times \dfrac{LOADFCST\_G\_I(i)}{LOADFCST\_G\_I(LDLP\_N\_I(n,i))} & \text{if } LOADFCST\_G\_I(i) \neq 0 \\ & \text{and } LOADFCST\_G\_I(LDLP\_N\_I(n,i)) \neq 0 \\ ACTIVE\_N\_D(n,i) & \text{otherwise} \end{cases} \tag{56}$$

4 Calculation Engine

AEMO uses the same calculation engine for both settlement and prudentials. Settlement calculations are determined for a Trading Week; however, prudential calculations are determined for each Trading Day. Therefore, the common calculation engine has been implemented on a daily basis, and can then be aggregated to achieve the required settlement outputs.

4.1 Invocation

The following table outlines the invocation for the high-level calculations that occur after the metering calculations.

Variable	Scope Set
$TOTAL\_P\_D(p,d)$	$\forall d \in D(w)$ and $\forall p \in P(d)$
$SOMS\_G\_I(i)$	N/A

4.6 RTM Suspension Compensation

Real-Time Market Suspension Compensation is split into the following parts:

- Market Participant Deficit Amount paid to a Market Participant to cover a shortfall during a suspension.
- Charge to Market Participants to recover the cost of a Market Suspension Deficit Amount.
- Charge to a Market Participant to recover a Market Participant Excess Amount.
- Market Suspension Excess Amount paid to Market Participants to redistribute the excess paid during a suspension.

These equations are based on the equations stated in MR 9.11A.

$$\begin{aligned} MSCSA\_P\_D(p,d) = {} & MPDA\_P\_D(p,d) - MPEA\_P\_D(p,d) \\ & - MSDAcharge\_P\_D(p,d) + MSEArebate\_P\_D(p,d) \end{aligned} \tag{101}$$

4.7.1.1 SESSM Award Availability Payments

A SESSM Award is granted to a Market Participant in relation to a Facility to provide a specific FCESS.

In the first three years of operation of the market, a SESSM Award Duration is restricted to a maximum of 1 year and a maximum of 3 years thereafter.

A SESSM Award Duration is Trading Day based but may not align with a Trading Week or a Trading Month or a Capacity Year. A SESSM Award Duration is represented in the formulas as a Trading Day range, where the function $SArange(sa)$ is used to return the full time range of the relevant SESSM Award i.e. from Trading Day, to Trading Day.

$$AP\_SA\_DI(sa,di) = \begin{cases} PDIAP\_SA\_X(sa, SArange(sa)) & AQ\_SA\_DI(sa,di) > 0 \\ 0 & \text{otherwise} \end{cases} \quad (121)$$

4.7.2.2 Facility Runway Share

This section calculates the facility runway shares for Facilities deemed to be causers of Facility Contingencies. Each Facility is ranked in ascending order of their Facility Risk value and allocated a runway share based on that rank.

$$FRS\_F\_DI(f,di) = \sum_{r=1}^{FRrank\_F\_DI(f,di)} \frac{\left(\frac{FRisk\_F\_DI(AF[r],di) - FRisk\_F\_DI(AF[r-1],di)}{LFR\_G\_DI(di)}\right)}{MAXr\_G\_DI(di) - r + 1}, \text{where } FRisk\_F\_DI(AF[0],di) = 0 \quad (150)$$

$$FRrank\_F\_DI(f,di) = \text{Position of applicable facility } f \text{ in } AFordered\_G\_DI(di) \quad (151)$$

$$AFordered\_G\_DI(di) = AF\_DI(di) \text{ ordered by ascending } FRisk\_F\_DI(f,di) \text{ and then alphabetically} \quad (152)$$

The expression $AF[r]$ returns the r-th element of the set $AFordered\_G\_DI(di)$ and the following equation shows the interaction between $AFordered\_G\_DI(di)$, $FRrank\_F\_DI(f,di)$ and $AF[r]$:

$$AF[FRrank\_F\_DI(f,di)] = f \quad (153)$$

$$MAXr\_G\_DI(di) = |AF\_DI(di)| \quad (154)$$

4.7.2.3 Network Runway Share

This section calculates the Network Contingency runway shares for Registered Facilities deemed to be causers of Network Contingencies. Each Registered Facility that is a member of the set of causer facilities is ranked in ascending order of their Facility Risk value and allocated a runway share based on that rank.

$$NRS\_FNC\_DI(f, nc, di) = \sum_{r=1}^{NRrank\_FNC\_DI(f,nc,di)} \frac{\left(\frac{FRisk\_F\_DI(CF[r],di) - FRisk\_F\_DI(CF[r-1],di)}{LFR\_NC\_DI(nc,di)}\right)}{MAXr\_NC\_DI(nc, di) - r + 1}, \text{where } FRisk\_F\_DI(CF[0], di) = 0 \tag{164}$$

$$NRrank\_FNC\_DI(f, nc, di) = \text{Position of Facility } f \text{ in } CFordered\_NC\_DI(nc, di) \tag{165}$$

$$CFordered\_NC\_DI(nc, di) = CF\_NC\_DI(nc, di) \text{ ordered by ascending } FRisk\_F\_DI(f, di) \text{ and then alphabetically} \tag{166}$$

The expression $CF[r]$ returns the r-th element of the set $CFordered\_NC\_DI(nc, di)$ and the following equation shows the interaction between $CFordered\_NC\_DI(nc, di)$, $NRrank\_FNC\_DI(f, nc, di)$ and $CF[r]$:

$$CF[NRrank\_FNC\_DI(f, nc, di)] = f \tag{167}$$

$$MAXr\_NC\_DI(nc, di) = |CF\_NC\_DI(nc, di)| \tag{168}$$

$$LFR\_NC\_DI(nc, di) = FRisk\_F\_DI(CF[MAXr\_NC\_DI(nc, di)], di) \tag{169}$$

$$CF\_NC\_DI(nc, di) = \{f \in F\_NC\_DI(nc, di) \cap (AF\_DI(di) \cup AFadditional\_DI(di))\} \tag{170}$$

4.7.2.4 RTM Suspension Share

When the Real-Time Market is suspended, the Central Dispatch Process is not available to determine the Facility Risk and Network Risks which input to the runway share determined in Appendix 2A. Instead, the contribution share for Contingency Reserve Raise is calculated using the Metered Schedules for Facilities with injection greater than 10MW in the Dispatch Interval.

$$RTMSuspShare\_P\_DI(p, di) = \frac{RTMSuspCQ\_P\_DI(p, di)}{RTMSuspCQ\_G\_DI(di)} \tag{171}$$

4.7.16 FCESS Uplift Payments

FCESS Uplift Payments are made to Market Participants in respect of their Registered Facilities where the Facility's *estimated dispatch cost* exceeds its *base compensation amount*. The calculation is intended to ensure that if FCESS Market Clearing Prices are high enough to cover a Facility's enablement losses, the FCESS Uplift Payment does not over-compensate the Market Participant. The provision of RoCoF Control Service does not qualify a Facility for an FCESS Uplift Payment.

The cost of FCESS Uplift Payments is allocated according to the causer pays principle for the relevant FCESS.

$$FCESSUpayment\_P\_D(p,d) = \sum_{i \in I(d)} FCESSUpayment\_P\_I(p,i) \tag{267}$$

$$FCESSUpayment\_P\_I(p,i) = \sum_{f \in REG\_F(p,i)} FCESSUpayment\_F\_I(f,i) \tag{268}$$

$$FCESSUpayment\_F\_I(f,i) = \sum_{di \in DI(i)} FCESSUpayment\_F\_DI(f,di) \tag{269}$$

$$FCESSUpayment\_F\_DI(f,di) = \begin{cases} max(0, RTMDC\_F\_DI(f,di) - RTMBC\_F\_DI(f,di)) & \text{if } FUPEFlag\_F\_DI(f,di) = 1 \\ 0 & \text{otherwise} \end{cases} \tag{270}$$

$$FUPEFlag\_F\_DI(f,di) = \begin{cases} 1 & \text{if } RTMSuspFlag\_G\_DI(di) = 0 \\ & \text{and } f \in SF(d) \cup SSF(d) \\ & \text{and } MISPRICE\_F\_DI(f,di) = 0 \\ & \text{and } DT\_F\_DI(f,di) > 0 \\ & \text{and } FCESSQ\_F\_DI(f,di) > 0 \\ 0 & \text{otherwise} \end{cases} \tag{271}$$

4.7.16.1 RTM Dispatch Cost

The *estimated dispatch cost* is calculated as the sum of (a) the Facility's deemed energy provision costs, determined using the offer price for each dispatched tranche of energy in its FCESS Minimum Dispatch Target; and (b) the Facility's deemed FCESS provision costs, determined using the offer price for each dispatched tranche of the FCESS in its adjusted Essential System Service Enablement Quantity.

$$RTMDC\_F\_DI(f,di) = RTEDC\_F\_DI(f,di) + CRDC\_F\_DI(f,di) + CLDC\_F\_DI(f,di) + RRDC\_F\_DI(f,di) + RLDC\_F\_DI(f,di) \quad (273)$$

4.7.16.2 RTM Base Compensation

The base compensation amount is calculated as the sum of (a) the Facility's FCESS Minimum Dispatch Target multiplied by the relevant price for that energy; and (b) the base payment made for each of the four applicable FCESS.

$$RTMBC\_F\_DI(f,di) = FCESSMinBC\_F\_DI(f,di) + CRBC\_F\_DI(f,di) + CLBC\_F\_DI(f,di) + RRBC\_F\_DI(f,di) + RLBC\_F\_DI(f,di) \quad (299)$$

4.7.16.3 FCESS Minimum Dispatch Target

The FCESS Minimum Dispatch Target is the minimum theoretical Dispatch Target from which a Facility would have been able to provide the Essential System Service Enablement Quantities that were determined for the Facility for the Dispatch Interval. It is usually the same as the Dispatch Target for the Dispatch Interval but may be a lower value e.g. if the Facility is ramping down due to an energy price change and is subject to a binding ramp down rate constraint in the Dispatch Interval.

$$FCESSMinDT\_F\_DI(f,di) = \begin{cases} max(0, RaiseMinDT\_F\_DI(f,di), LowerMinDT\_F\_DI(f,di)) & \text{if } FUPEFlag\_F\_DI(f,di) = 1 \\ 0 & \text{otherwise} \end{cases} \quad (305)$$

$$RaiseMinDT\_F\_DI(f,di) \tag{306}$$
$$= \begin{cases} max(EMCR\_F\_DI(f,di), EMRR\_F\_DI(f,di)) & \text{if } CRquantity\_F\_DI(f,di) > 0 \text{ and } RRquantity\_F\_DI(f,di) > 0 \\ EMCR\_F\_DI(f,di) & \text{if } CRquantity\_F\_DI(f,di) > 0 \text{ and } RRquantity\_F\_DI(f,di) \leq 0 \\ EMRR\_F\_DI(f,di) & \text{if } RRquantity\_F\_DI(f,di) > 0 \text{ and } CRquantity\_F\_DI(f,di) \leq 0 \\ 0 & \text{otherwise} \end{cases}$$

4.8 Reserve Capacity

Reserve Capacity is split into the following parts:

- Capacity Payments for unallocated Capacity Credits.
- Capacity Credit Over-allocations Payments for receiving more Capacity Credit Allocations than the IRCR.
- Supplementary Capacity Payments associated with a Supplementary Capacity Contract.
- TRCC Charges to fund the cost of Capacity up to the Reserve Capacity Requirement.
- SRCC Charges to fund the payment of Capacity in excess of the Reserve Capacity Requirement.
- Capacity Cost Refunds charges resulting from failure to meet obligations relating to Capacity Credits.
- Intermittent Load Refunds charges for Intermittent Load Refunds.

4.8.3.1 Targeted Reserve Capacity Cost

MR 4.28.1(a) outlines the Targeted Reserve Capacity Cost as the cost of Capacity Credits acquired by AEMO (not traded bilaterally through a Capacity Credit Allocation) to just meet the Reserve Capacity Requirement. To implement this the following steps are followed.

Step 1: Determine how many Capacity Credits need to be acquired by AEMO to just meet the Reserve Capacity Requirement.

$$TRCCQ\_G\_D(d) = min(RCR\_G\_CY(d), CC\_G\_D(d)) - (CCAR\_G\_D(d) - CCAOA\_G\_D(d)) \quad (333)$$

$$CC\_G\_D(d) = \sum_{f \in CCF(d)} CC\_F\_D(f,d) \quad (334)$$

$$CCAR\_G\_D(d) = \sum_{p \in P(d)} CCAR\_P\_D(p,d) \quad (335)$$

$$CCAOA\_G\_D(d) = \sum_{p \in P(d)} CCAOA\_P\_D(p,d) \quad (336)$$

Step 2: Identify the set of all Capacity Credits acquired by AEMO and order them by descending price.

$$CCTRCC\_G\_D(d) = \{t : T2P(t) \in P(d) \text{ or } T2F(t)) \in CCF(d)\}$$
ordered by descending $CCP\_T\_D(t,d)$ and then alphabetically, where $t \in CCTRCC\_G\_D(d)$ (337)

$$CCP\_T\_D(t,d) = \begin{cases} EAP\_P\_D(t,d) & \text{for } t \in P(d) \\ RCP\_F\_D(T2F(t),d) & \text{for } t \in CCF(d) \end{cases} \quad (338)$$

$$CCQ\_T\_D(t,d) = \begin{cases} CCAOA\_P\_D(t,d) & \text{for } t \in P(d) \\ CC\_F\_D(t,d) - CCAM\_F\_D(t,d) & \text{for } t \in CCF(d) \end{cases} \quad (339)$$

$$TRCCrank\_T\_D(t,d) = \text{Position of price-quantity pair } t \text{ in } CCTRCC\_G\_D(d) \tag{340}$$

Step 3: Determine the cost of Capacity Credits acquired by AEMO to just meet the Reserve Capacity Target.

$$TRCC\_G\_D(d) = \sum_{t \in CCTRCC\_G\_D} CCP\_T\_D(t,d) \times min\left(CCQ\_T\_D(t,d), max(0, TRCCQ\_G\_D(d) - CCCQ\_T\_D(t,d))\right) \tag{341}$$

$$CCCQ\_T\_D(t,d) = \sum_{\substack{u \in CCTRCC\_G\_D(d) \\ TRCCrank\_T\_D(u,d) < TRCCrank\_T\_D(t,d)}} CCQ\_T\_D(u,d) \tag{342}$$

4.8.5.2 Refund Caps

The calculations of $MAXFR\_F\_CY$, $MAXGR\_P\_CY$ and $MAXPGR\_P\_CY$ require calculations for all Trading Days in the Capacity Year. This is important to note as very few other calculations require this forward-looking calculation. In order to perform this forward-looking calculation, the following assumptions are made for future Trading Days:

- $CC\_F\_D(f, d+1) = CC\_F\_D(f, d)$
- The Facility remains registered to the current Market Participant for the remainder of the Capacity Year.

$$MAXPGR\_P\_CY(p, cy) = \sum_{d \in D\_CY(cy)} MAXPGR\_P\_D(p, d) \tag{363}$$

$$MAXPGR\_P\_D(p, d) = \sum_{f \in SF(p,d) \cup SSF(p,d) \cup NSF(p,d) \cup indSF(p,d) \cup indSSF(p,d) \cup indNSF(p,d)} MAXFR\_F\_D(f, d) \tag{364}$$

$$MAXFR\_F\_CY(f,cy) = \sum_{d \in D\_CY(cy)} MAXFR\_F\_D(f,d) \quad (365)$$

$$MAXFR\_F\_D(f,d) = CC\_F\_D(f,d) \times RCP\_F\_D(f,d) \quad (366)$$

4.9 Market Participant Fees

Fees are split into the following parts:

- Market Fees
- Regulator Fees
- Coordinator Fees

The corresponding payment made to AEMO, the ERA and the Coordinator are included in a separate chapter titled Service Fees.

These equations are based on the equations stated in MR 9.12.

$$MPFSA\_P\_D(p,d) = -(MPMFSA\_P\_D(p,d) + MPRFSA\_P\_D(p,d) + MPCFSA\_P\_D(p,d)) \quad (426)$$

4.11 Default Levy Adjustment

By the end of the second month following the end of a Financial Year, AEMO must re-allocate any Default Levies raised during that Financial Year.

Default Levy Adjustment is split into two parts:

- Payment to a Participant for re-allocation of Default Levies raised during the most recently ended Financial Year.
- Charge to a Participant for re-allocation of Default Levies raised during the most recently ended Financial Year.

$$DLASA\_P\_D(p,d) = DLAP\_P\_D(p,d) - DLAC\_P\_D(p,d) \tag{435}$$

$$DLAP\_P\_D(p,d) = \frac{max(0, DLA\_P\_W(p,w))}{7} \tag{436}$$

$$DLAC\_P\_D(p,d) = \frac{-min(0, DLA\_P\_W(p,w))}{7} \tag{437}$$

Variable	Units	SC	GR	Rule	Description	Ref
DLASA_P_D(p, d)	$	P	D	9.20.11(e)	Default Levy Adjustment settlement amount for participant p in Trading Day d	(435)

4.12 GST

GST is charged for the provision of eligible goods and services. The Variable Categorisation section outlines which statement summary variables (of Trading Day granularity) have GST applied and which are exempt. The interval-equivalent variables are identified in the sets used in the equations below.

$$GST\_P\_D(p,d) = GSTP\_P\_D(p,d) - GSTC\_P\_D(p,d) \tag{438}$$

$$GSTP\_P\_D(p,d) = GST\_G\_D(d) \times \sum_{v \in PGST(d)} v(p,d) \tag{439}$$

$$GSTC\_P\_D(p,d) = GST\_G\_D(d) \times \sum_{v \in CGST(d)} v(p,d) \tag{440}$$

I(d)	{}	G	D	Ch 11	Set of Trading Intervals in Trading Day d	I

4.13 Interest

Interest is paid/charged in the WEM for two reasons:

- Interest paid/charged as part of the Adjustment Process [MR 9.1.3]
- Interest paid on security deposits [MR 2.38.5, 4.13.6, 4.13.14, 4.13A.13, and 4.13A.19]

The payment of interest on security deposits is handled separate to that outlined in this formulation.

$$NETINT\_P\_D(p,d) = INTP\_P\_D(p,d) - INTC\_P\_D(p,d) \tag{441}$$

$$INTP\_P\_D(p,d) = max(0, INT\_P\_D(p,d)) \tag{442}$$

$$INTC\_P\_D(p,d) = -min(0, INT\_P\_D(p,d)) \tag{443}$$

4.14 Estimation

Prudential calculations require the estimation of exposure before all inputs are known.

When estimating settlement data for prudentials, AEMO does not modify settlement equations, but instead estimates inputs which are not known at the time of calculation. This section details the methodology for estimating non-metering settlement inputs (refer to Section 3.3 for the methodology for estimating metering inputs).

When undertaking a settlement run, no inputs are estimated, as required under the rules.

$$estMAXTEMP\_F\_D(f,d) = \begin{cases} MAXTEMP\_F\_D(f,d) & \text{if } ESTIMATIONFlag\_G\_W(d) = 0 \\ & \text{or } TEMPNullFlag\_G\_D(d) = 0 \\ 25°C & \text{otherwise} \end{cases} \quad (448)$$

$$estIRCR0\_P\_M(p,m) = \begin{cases} IRCR0\_P\_M(p,m) & \text{if } ESTIMATIONFlag\_G\_W(d) = 0 \\ & \text{or } IRCR0NullFlag\_G\_M(m) = 0 \\ IRCRindicative\_P\_M(p,m) & \text{otherwise} \end{cases} \quad (449)$$

$$estRCOQ\_F\_I(f,i) = \begin{cases} RCOQ\_F\_I(f,i) & \text{if } ESTIMATIONFlag\_G\_W(d) = 0 \\ & \text{or } RCOQFINullFlag\_F\_D(i) = 0 \\ STEMRCOQ\_F\_I(f,i) & \text{otherwise} \end{cases} \quad (450)$$

$$estRCOQ\_SCC\_DI(scc, di)$$

5 Payments and Charges

Payments refer to amounts that are paid by AEMO to the participant and charges refer to amounts that are paid by the participant to AEMO. Each of these amounts may change between positive and negative values as a result of the Adjustment Process.

5.1 Variable Categorisation

The table below outlines the variables that are payments ('P') or charges ('C'), whether GST is applicable ('Y' or 'N'), and the description of the line item as it appears on the Invoice.

Variable	P/C	GST	Rule	Ref	Invoice line item description
STEMSAS_P_D(p, d)	P	Y	9.7	(66)	Payment for STEM energy sold
STEMSAD_P_D(p, d)	C	Y	9.7	(67)	Charge for STEM energy purchased
ETSA_P_D(p, d)	P	Y	9.9.4	(73)	Payment for Real-Time Market energy sold
ETDA_P_D(p, d)	C	Y	9.9.4	(74)	Charge for Real-Time Market energy purchased
EUP_P_D(p, d)	P	Y	9.9.6	(81)	Payment for Energy Uplift Payments
EUR_P_D(p, d)	C	Y	9.9.15	(89)	Charge for Energy Uplift Payments
OCP_P_D(p, d)	P	Y	9.11.3	(96)	Payment for Outage Compensation
OCR_P_D(p, d)	C	Y	9.11.6	(98)	Charge for Outage Compensation
MPDA_P_D(p, d)	P	Y	9.11A.4	(102)	Payment for Market Participant Deficit Amount
MPEA_P_D(p, d)	C	Y	9.11A.5	(106)	Charge for Market Participant Excess Amount
MSEArebate_P_D(p, d)	P	Y	9.11A.9	(103)	Payment for market suspension excess amount
MSDAcharge_P_D(p, d)	C	Y	9.11A.6	(107)	Charge for market suspension deficit amount
CRpayment_P_D(p, d)	P	Y	9.10.4	(113)	Payment for Contingency Reserve Raise
CLpayment_P_D(p, d)	P	Y	9.10.8	(175)	Charge for Contingency Reserve Raise
RoCoFpayment_P_D(p, d)	P	Y	9.10.12	(188)	Payment for RoCoF Control Service
RRpayment_P_D(p, d)	P	Y	9.10.20	(224)	Payment for Regulation Raise
RLpayment_P_D(p, d)	P	Y	9.10.20	(240)	Payment for Regulation Lower
SRSpayment_P_D(p, d)	P	Y	9.10.25	(253)	Payment for System Restart Service
NCESSpayment_P_D(p, d)	P	Y	9.10.27A	(261)	Payment for NCESS
FCESSUpayment_P_D(p,d)	P	Y	9.10.3A	(267)	Payment for FCESS Uplift Payments
CRcharge_P_D(p, d)	C	Y	9.10.29	(136)	Charge for Contingency Reserve Raise
CLcharge_P_D(p, d)	C	Y	9.10.31	(183)	Charge for Contingency Reserve Lower
RoCoFcharge_P_D(p, d)	C	Y	9.10.33	(196)	Charge for RoCoF Control Service
RRcharge_P_D(p, d)	C	Y	9.10.35	(232)	Charge for Regulation Raise
RLcharge_P_D(p, d)	C	Y	9.10.35	(248)	Charge for Regulation Lower
SRScharge_P_D(p, d)	C	Y	9.10.40	(255)	Charge for System Restart Service
NCESScharge_P_D(p, d)	C	Y	9.10.44	(261)	Charge for NCESS
CCSA_P_D(p, d)	P	Y	9.8.3(b)	(321)	Payment for non-allocated Capacity Credits
IMLR_P_D(p, d)	C	Y	4.29.3(dA)	(424)	Charge for Intermittent Load Refunds
SUPCAPSA_P_D(p, d)	P	Y	9.8.3(d)	I	Payment for Supplementary Capacity Contracts
CCR_P_D(p, d)	C	Y	4.6.2E	(355)	Charge for Capacity Cost Refund
CCAOASA_P_D(p, d)	P	Y	9.8.3(f)	(324)	Payment for Capacity Credit Allocation over-allocation
TRCC_P_D(p, d)	C	Y	9.8.4(a)	(328)	Charge for Targeted Reserve Capacity Cost
SRCC_P_D(p, d)	C	Y	9.8.4(b)	(343)	Charge for Shared Reserve Capacity Cost
MPMFSA_P_D(p, d)	C	N	9.12.3	(427)	Charge for Market Participant Market Fees
MPRFSA_P_D(p, d)	C	N	9.12.4	(430)	Charge for Market Participant Regulator Fees
MPCFSA_P_D(p, d)	C	N	9.12.4A	(431)	Charge for Market Participant Coordinator Fees
SFMFSA_P_D(p, d)	P	N	9.13.2	(432)	Payment for Service Fee Market Fees
SFRFSA_P_D(p, d)	P	N	9.13.3	(433)	Payment for Service Fee Regulator Fees
SFCFSA_P_D(p, d)	P	N	9.13.4	(434)	Payment for Service Fee Coordinator Fees
DLAP_P_D(p, d)	P	N	9.20.11(e)	(436)	Payment for reallocation of Default Levies
DLAC_P_D(p, d)	C	N	9.20.11(e)	(437)	Charge for reallocation of Default Levies
GSTP_P_D(p, d)	P	N	9.1.3	(439)	Payment for GST
GSTC_P_D(p, d)	C	N	9.1.3	(440)	Charge for GST
INTP_P_D(p, d)	P	N	9.1.4	(442)	Payment for Interest
INTC_P_D(p, d)	C	N	9.1.4	(443)	Charge for Interest

5.2 Zero Sum Groups

The table below assists in understanding how the payments and charges are related. The categories may not be explicitly written this way in the WEM Rules, however representing them this way allows the zero sum concept to be demonstrated conceptually. The only non-zero sum component within the settlement summary variables is when AEMO is required to draw down on Reserve Capacity Security or DSP Reserve Capacity Security, which are represented by $RCSD\_G\_D(d)$ and $DSPRCSD\_G\_D(d)$, respectively. This is because the provision of Reserve Capacity Security or DSP Reserve Capacity Security by a Market Participant to AEMO occurs outside of settlement but distribution of the draw down on this security occurs within settlement.

Category	Payments	=	Charges
STEM	STEMSAS_G_D(d)	=	STEMSAD_G_D(d)
Energy	ETSA_G_D(d)	=	ETDA_G_D(d)
Energy Uplifts	EUP_G_D(d)	=	EUR_G_D(d)
Changed Outage Compensation	OCP_G_D(d)	=	OCR_G_D(d)
Market Suspension Excess	MSEArebate_G_D(d)	=	MPEA_G_D(d)
Market Suspension Deficit	MPDA_G_D(d)	=	MSDAcharge_G_D(d)
Frequency Co-optimised Essential System Services	CRpayment_G_D(d) + CLpayment_G_D(d) + RRpayment_G_D(d) + RLpayment_G_D(d) + RoCoFpayment_G_D(d) + FCESSUpayment_G_D(d)	=	CRcharge_G_D(d) + CLcharge_G_D(d) + RRcharge_G_D(d) + RLcharge_G_D(d) + RoCoFcharge_G_D(d)
NCESS Contracts excluding Peak Capacity	NCESSpayment_G_D(d) - PeakNCESSpayment_G_D(d)	=	NCESScharge_G_D(d)
System Restart Service	SRSpayment_G_D(d)	=	SRScharge_G_D(d)
Reserve Capacity	CCSA_G_D(d) + CCAOASA_G_D(d) + SUPCAPSA_G_D(d) + PeakNCESSpayment_G_D(d)	=	TRCC_G_D(d) + SRCC_G_D(d) + IMLR_G_D(d) + RCSD_G_D(d) + DSPRCSD_G_D(d) + CCR_G_D(d)
Market Fees	SFMFSA_G_D(d)	=	MPMFSA_G_D(d)
Regulator Fees	SFRFSA_G_D(d)	=	MPRFSA_G_D(d)
Coordinator Fees	SFCFSA_G_D(d)	=	MPCFSA_G_D(d)
Default Levy Adjustments	DLAP_G_D(d)	=	DLAC_G_D(d)
GST	GSTP_G_D(d)	=	GSTC_G_D(d)
Interest	INTP_G_D(d)	=	INTC_G_D(d)

6 Settlements

Daily outputs from the common calculation engine may be aggregated by the participant to achieve the required settlement outputs.

6.1 Weekly Settlement Amount

$$TOTAL\_P\_W(p,w) = \sum_{d \in D(w)} TOTAL\_P\_D(p,d) \tag{453}$$

Variable	Units	SC	GR	Rule	Description	Ref
TOTAL_P_W(p, w)	$	P	W0		Total settlement amount (including GST and interest) for participant p in Trading Week w	(453)
TOTAL_P_D(p, d)	$	P	D		Total settlement amount (including GST and interest) for participant p in Trading Day d	(62)
D(w)	{}	G	W0	Ch 11	Set of Trading Days in Trading Week w	I

7 Prudentials

Trading Margin calculations are performed on a daily basis to manage prudential risk. An input to these equations are the outputs of the settlement calculations documented in previous sections.

7.1 Trading Margin

$$TM\_P\_D(p,d) = TL\_P\_D(p,d) - OA\_P\_D(p,d) \tag{454}$$

$$TL\_P\_D(p,d) = PF\_G\_D(d) \times CREDSUP\_P\_D(p,d) \tag{455}$$

$$PF\_G\_D(d) = 0.87 \tag{456}$$

$$OA\_P\_D(p,d) = CEE\_P\_D(p,d) + INP\_P\_D(p,d) - PP\_P\_D(p,d) \tag{457}$$

$$CEE\_P\_D(p,d) = \sum_{j \in EXPDAYS(d)} EE\_P\_D(p,j) \tag{458}$$

$$EE\_P\_D(p,d) = -(TOTAL\_P\_D(p,d) - TOTALprev\_P\_D(p,d)) \tag{459}$$

Variable	Units	SC	GR	Rule	Description	Ref
TM_P_D(p, d)	$	P	D	2.41.1	Trading Margin for participant p for Trading Day d	(454)
TL_P_D(p, d)	$	P	D	2.39.1	Trading Limit for participant p for Trading Day d	(455)
CREDSUP_P_D(p, d)	$	P	D	2.38	Credit Support held by AEMO on behalf of participant p on Trading Day d	I
PF_G_D(d)		G	D	2.39.2	Prudential factor on Trading Day d	(456)
OA_P_D(p, d)	$	P	D	2.40.1	Outstanding Amount for participant p on Trading Day d	(457)
INP_P_D(p, d)	$	P	D		Amount of money participant p owes for which a Settlement Statement has been issued, but payment has not been made, as calculated on Trading Day d	I
PP_P_D(p, d)	$	P	D	2.40.1(c)	Prepayments held by AEMO on behalf of participant p on Trading Day d	I
CEE_P_D(p, d)	$	P	D		Cumulative Estimated exposure for participant p as calculated on Trading Day d	(458)
EE_P_D(p, d)	$	P	D		Estimated exposure for participant p relating to Trading Day d	(459)
TOTALprev_P_D(p, d)	$	P	D		Total Settlement Statement amount (including GST and interest) for participant p in Trading Day d from most recently published Settlement Statement for Trading Day d	I
TOTAL_P_D(p, d)	$	P	D		Total settlement amount (including GST and interest) for participant p in Trading Day d	(62)
EXPDAYS(d)	{}	G	D		Set of Trading Days that have not yet had a Settlement Statement issued, up to and including Trading Day d-1	I
