

The following table provides the information on the operation of the Swing Service market on the North Metro and South Metro sub-networks over a 13 month rolling window.

Month	Metro-South Sub-Network		Metro-North Sub-Network	
	Peak SS South-Metro	Average SS South-Metro	Peak SS North-Metro	Average SS North-Metro
December 2020	2,011	90	854	69
January 2021	1,355	56	235	33
February 2021	41	9	303	24
March 2021	47	18	36	14
April 2021	127	32	184	31
May 2021	220	29	253	28
June 2021	127	32	179	33
July 2021	476	22	182	19
August 2021	601	23	99	8
September 2021	6	2	34	4
October 2021	9	4	211	21
November 2021	8	4	288	17
December 2021	4,035	242	4,308	234
Average	2-year	65	2-year	64

North Metro

Average and peak swing service volumes in the North Metro sub-network were at relatively low levels for most of the month of December 2021 with the exception of major spikes on gas days 27, 29 and 31 December.

The spikes on gas days 27 and 31 December were due to mismatch between pipeline injection and total user pipeline nomination amount (UPNA). For gas day 27 December, Alinta Energy did not provide UPNA for North Metro and South Metro sub-networks.

The spike on gas day 29 December was due to a number of user's calculated deemed withdrawals not matching their UPNAs for North Metro and South Metro sub-networks as their UPNAs did not include swing service repayment quantities (SRQ).

South Metro

Average and peak swing service volumes in the South Metro sub-network were at relatively low levels for most of the month of December 2021 with the exception of major spikes on gas days 27, 29 and 31 December. The spikes were due to the same reasons as the North Metro sub-network.

13 Month Swing Service Results

Daily Swing Service Volumes for a Two Month Period

Terms:

- Peak SS means the maximum amount of Swing Service recorded on a day during that month.
- Average SS means the average amount of Swing Service for any day in that month.
- Peak Trend is the linear trend of the Peak SS data, using the least squares method.
- Average Trend is the linear trend of the Average SS data, using the least squares method.
- Tolerance Band is a marker – AEMO will investigate and report on any Swing Service spikes that are larger than the Tolerance Band. The Tolerance Band is defined as a volume equal to the mean amount of Swing Service over the last 2 years plus 3 standard deviations.
