

# AEMO Hub and Signing Certificate Update

## Certificate Replacement – IMPORTANT UPDATE

# AEMO Hub and Signing Certificate Information

In the upcoming scheduled changes there are two main types of certificates being replaced. To avoid connection issues it is vital your organisation trusts and updates these certificates appropriately

## Hub Certificate GAS & ELEC

**eHub & GAS FRC Hub**  
The certificate that identifies AEMO to you. During TLS handshakes.

**ACTION REQUIRED:** **Low;**  
Participants need to make sure they trust this certificate before the cutover date

**WHEN:** Asynchronous change; Can be done before relevant change window

Prod

## Signing Certificate GAS ONLY

**GAS ebXML Sign/Verify**  
This is a certificate is used by AEMO to sign ebXML payloads sent to participants.

**ACTION REQUIRED:** **High;**  
Participants must update their profiles for verifying AEMO payloads in order to continue transacting

**WHEN:** Synchronous change; Should be done during relevant change window

# Timeline for Replacement

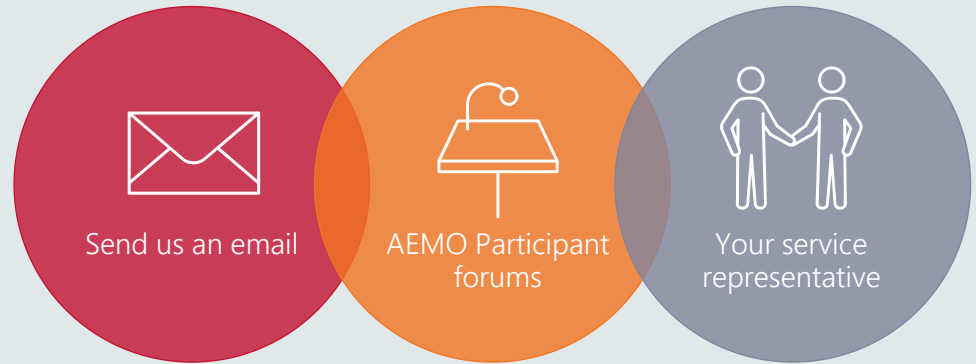

Below are dates when changes on the platforms go live. Actions on the previous slide must be completed to avoid connection issues

\*\* Test Cutover: AEMO will temporarily replace the production **TLS** certificate (not sign/verify) during the scheduled change window above. This will then be reverted back to the original certificate again until the final hard cutover period above.

Please Note: Any connectivity issues during the time below should be looked at to check for certificate replacement issues\*\*
