

# General Update

Gas Market Monitoring

# Updates

- STTM - six instances of late capacity information or late allocation data from facility operators (no instances in 2019). One incident related to a power outage but others related to system or process issues. A reminder to revisit backup processes.
- End of year reduced support. AEMO will be operating with reduced operational support from 18 Dec 2020 to 4 Jan 2021.
- Across all markets – if you are having issues with AEMO systems first point of contact should be AEMO Support Hub on **1300 236 600** and ensuring the importance of the call is understood. Contacting Support Hub by email will generally result in a lower priority being applied, and will not be actioned outside of business hours.

# Updates

- Gas Transparency Measures (GBB and GSOO) public consultation submissions close on 17 December 2020

<http://www.coagenergycouncil.gov.au/publications/consultation-draft-regulatory-amendments-increase-transparency-gas-market-0>

AEMO will commence the project in January 2021. If there are updates that stakeholders would like to see made to the procedures feedback should be provided by the end of January.

- GBB – AEMO regularly reviews the integrity of the GBB data and makes necessary adjustments from time to time. As a result, retrospective updates have been made to the following connection points:
  - Amadeus Gas Pipeline:
    - Darwin City Gate (to DDS) (CP1808005) had data for CP1808006, and has now been rectified.
    - Darwin City Gate (to WPP) (CP1808006) had data for CP1808005, and has now been rectified.
